Prejudice and Social Integration

→ Prejudice & its characteristics — 10

→ ways of prejudice manifestation — 10

→ Component of prejudice — 10

→ Development of prejudice — 20

→ Removal of prejudice ⟶ causes — 20
                       ⟶ amelioration — 20

→ Inter group conflict

→ Social Integration ⟶ challenges — 20
                     ⟶ How to achieve — 15

＊#6 Prejudice

Latin word → Prejudicium (Prejudgement)

• Rose → Prejudice is an attitude that causes, supports & justifies discrimination.

• Buss → Hostility & aggression towards an individual based upon his membership in a particular group.

• Harding etal

⟶ failure of justice
⟶   "   " human heartedness
⟶   "   " judgement
                 ↓
(in an individuals attitude towards the members of other ethnic groups)

＊ Characteristics of Prejudice

(i) Prejudice is bad

(ii) It is intergroup phenomenon

(iii) It is attitude

688

(iv) It is -ve orientation

(v) It is based on over generalisation

(vi) Once acquired cannot be easily removed

(vii) Has some relevance for the person who holds it

(viii) consists of stereotypes, pre-judgements & nasty judgements.

* Components of Prejudice

3 components

(i) Cognitive   (ii) Affective   (iii) Action Tendency

(i) Cognitive Component

ↄ rigid beliefs } w.r.t target group (Prejudiced object)
ↄ stereotypes

(ii) Affective Component

ↄ -ve emotions   } towards Target group
ↄ irrational emotions

(iii) Action Tendency Component

possible beh. that one is likely to display towards Target group (PO)

- B/w Stereotypes are cognitive embodiment of prejudice

⇒ Prejudice → over generalisation & faulty Abstraction.

* Ways of Prejudice Manifestation

(i) Antilocution

ↄ speaking against someone
ↄ spreading rumours
ↄ locution → oratory

689

(ii) Avoidance
    ↳ purity - pollution

(iii) Discrimination
    ↳ Differential treatment to persons from a particular group.

• Discrimination can be done without prejudice → Indian govt.

• Prejudice can be there without discrimination → many times prejudices are held without their manifestation
(Also, situation or env. might not allow discrimination eg. if the people against whom prejudices are held, are strong & cannot be discriminated)

(Discrimination is a way of manifestation of prejudice)

(iv) Physical Assault (one person)

(v) Extermination
    ↳ Holocaust, ethnic cleansing (whole community)

⟹ (These⁵ 5 given by Allport)

⟹ 2 more → a) Exploitation

                    b) Competition

* Development of Prejudice
    (i) Societal Level Explanation
    (ii) Individual   "   "   —— I (Psychoanalytical)
    (iii)   "   "   "   —— II (Socio-cultural)

(i) Societal Level Explanation

    (1) Exploitation
    (2) Realistic Group Conflict Theory

690

(1) Exploitation

 ↳ started by Karl Marx

 ↳ Then by Neo Marxists

Karl Marx → In every society → Haves → Resources

           → Have Nots → Lack Resources

- As long as Have Nots serve the Haves without demanding anything → structure of society is maintained.

- If Have Nots develop ability to demand resources, it will change the equation (due to political changes, etc.)

      ⇓

   | Conflicts & Prejudices |

- Acc. to the theory → Prejudice is a -ve attitude that has been deliberately created by Haves to continue the exploitation of the Have Nots.

* __Research done in Agra__ → Conflict bet. Jats & Jatavs

           → Jatavs → leather work

- Jats have kept the condition on Jatavs that they will not carry their brides in palanquins.

⇒ After partition, many muslims left their leather work units → the Jatavs working there became owners.

⇒ This enabled the Jatavs to defy the authority of Jats
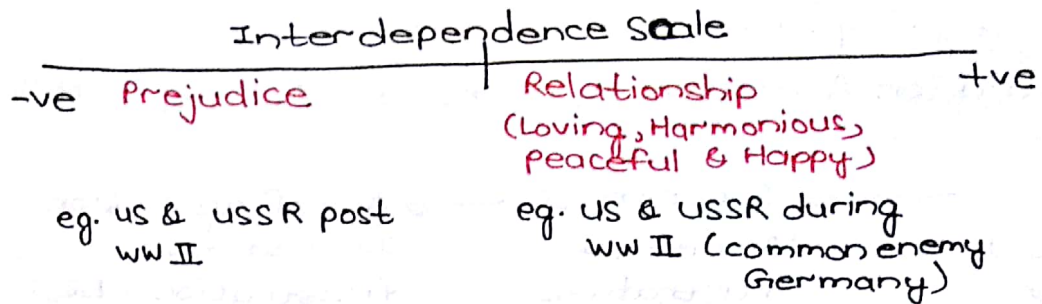

⇒ Communal conflict started

- Acc. to Research → Muslims & Hindus of sleepy muslims don't fight

        → as they share poverty

- In Aligarh & Agra → Muslims built business

        → Fight over resources started

691

(2) Realistic Group Conflict Theory

↳ Prejudice is the result of actual or perceived Inter group relation

Interdependence Scale

| -ve Prejudice | Relationship (Loving, Harmonious, Peaceful & Happy) | +ve |

eg. US & USSR post WW II

eg. US & USSR during WW II (common enemy Germany)

* +ve & -ve interdependence
   co-operation   conflict

* For Nation building ⇒ +ve interdepence is required.

* -ve interdependence ⇒ Explains prejudice bet. 2 groups

(ii) Individual Level explanation (Psychoanalytical)

↳ scapegoating
↳ Projection
↳ Authoritarian Personality

Ego ─── it can do sublimation but if it is not able to do
          so, then ⟶ scapegoating, projection, etc.
                        (To remove neutrotic anxiety)
Id   } Pressure (fixations)

⇒ Prejudice serves ego defensive function

⇒ Prejudice is caused because of anxiety (which cannot be reduced)

* Attitudes become prejudices when they are irreversible to change. (Allport) ⇒ This applies here

• Insecurity does not allow prejudices to go.

⇒ Those who champion the idea of removal of prejudice through education ⟶ Acc. to this theory it is not possible

⇒ Education just brings about intellectual change.

- **Scapegoating**
  ↳ This mechanism of prejudice dev. is based on:
  - a) Hostility displacement (freud)
  - b) Frustration Agression Hypothesis (Dollard & Miller)

Event ⟶ Joblessness ⟶ Act of agression
(Economic)   (Anxiety &   against the
Depression   frustration)   frustration (ED)

                                      ↳ invisible
                                      ↳ cannot be attacked
                                        as one cannot approach it
                                        ↳ powerful

                                   due to this

Aggression ⟵ Scapegoat
is released   is
on scapegoat   selected

- Scapegoat ⟶ a) Disliked
  - b) visible
  - c) Approachable (easily)
  - d) Relatively powerless to retaliate

* The theory explains maintenance of prejudices properly but not formation of prejudices.

* Not always scapegoat is relatively powerless (not explained by this theory)

- **Projection**
  ↳ It is one of the features of scapegoating
  ↳ Repression   ↳ more comprehensive
  ↳ person is not aware (the impulse is pushed into the unconscious)

  eg. your actions make others to act and then you blame them

⇒ Different mechanisms can act together.

* Authoritarian Personality.

(Adorno et al)

⇒ Is there a prejudice personality ⇒ No

  ↳ There is no personality characteristic which can guarantee that prejudice will be there.

• As there is no terrorist or athlete personality (even if there are some common traits)

• Adorno et al
  ↳ Some common characteristics of people who develop prejudice

  a) Ethnocentric
     ↳ everything from the perspective of my culture

  b) Unconscious conflicts

  c) Anti-democratic

  d) Low frustration tolerance
  e) Rigid behavior & belief system

  f)

* The term prejudice personality can have many connotations.
  1) A personality profile in people which is likely to turn them into prejudiced people.
  2) People when they have become prejucided, the acquire the traits shared by all prejudiced people

⇒ Prediction vs Postdiction

  ② is more common

⇒ Saying that, having a common trait shared by most prejudiced people → probability is high but no guarantee can be given.

⇒ Adorno et al → Half Theory.
                    → only talked about child rearing   694

practices (authoritarian) only & he took only freudian Approach.

→ Modeling, etc → The mechanisms not considered

eg. Common Trait of athletes → pain tolerance &
$$\Downarrow$$
better psycho-motor co-ordination
$$\Downarrow$$
But not all people with these traits will become athletes.

(iii) Individual Level Explanation - II (Socio-Cultural)

a) Socialization ——→ a) Rewards & Punishment
  b) Role playing
  c) trial & error
  etc.
  Through family, school, peer group, etc.

b) Putting 2+2 together
  b) Inference drawing Hypothesis

eg. Q1) Asking Father → why is Johnny our servant
          (white)   (Black)

  Father replies → His father was also our servant

  Inference ⇒ Blacks are meant to be servant

• |Attributional error & Selective Interpretation|

Q2) Why Johnny does not go to school?

  Father → I sent him to school but he did not study
  dropped out.
  (It was ignored that he was sent to evening school → He was tired after household chores)

  ⇒ Inference drawn :- Blacks are meant to be servants

c) Belief Incongruence

↳ The belief that my belief system & your belief systems are different

(This is an assumption)

eg. Without reading a scripture → believing that the value systems of the religions are different.

d) Conformity

↳ Dissonance   ↳ selective interpretation

↳ Attributional error   ↳   "   exposure

⇒ Pressure to conform → more pressure if the group is important to you.

Dissonance

eg. During apartheid time → keeping black servants at the shop

⇒ White people boycotted you

⇒ Dissonance as value to make profit is compromised.

⇒ One day a black tries to steal from your shop

     ↳ Label all blacks as cheats

     ↳ Remove them from your shop

            ⇓

        Dissonance
        Reduced

⇒ For most people, ways to reduce dissonance are the ones that strengthen prejudices.

⇒ Dissonance can reduce prejudices → only if no other ways of justification are used.

⇒ But people use change with least effort and

696

strengthening of prejudices generally happens.

* Removal of Prejudices

• Freudian

* Symptomatic Theory Approach

Bring about Ego Maturity $\longrightarrow$ by developing insight into repressed impulses.

(a) Change CRPs

↳ Authoritarian → prejudices (lot of unconscious conflicts)

↳ Shift it to democratic

→ This is difficult as CRP is a personal affair. Also, a person who has been authoritarian ~~whole~~ whole life, will not change suddenly.

(b) Reducing conflict arousing aspects of their env.

↳ Dollard & Miller
(Economic Depression)

Research shows → Lynching of blacks in US increased during Economic Depression

→ Conflicts will not come only at the time of distress due to env. factor but also at the times of prosperity
$\downarrow$
Relative Deprivation

(c) Psychotherapy

↳ If it is a) group psychotherapy
b) Clinical Interviews
c) Sensitivity Training
} found to be effective

d) Self Insight Training
↳ done by Katz etal

697

He took 2 groups

    Grp I
    (Insighted group)   ⇒ Made to read an essay called
                                  'Emotions & Attitude'
    Grp II   ↳ described dynamics of
    (Information group)   scapegoating, compensation
                                  & projection in the development
                                  of prejudice.

In Grp II → attempt was to correct their misinformation

In Grp I → help of case studies, explanations, real life
               example
                 ⇓
          How conflicts in the unconscious leads to
          development of prejudices.

* Attitudes towards ethnic groups was measured:
    ↳ No change

    ~~Aftte~~ After 6 months ⟶ Insighted group → significant
                                      reduction in
                                      prejudice

                     → Misinformed group → no change

⇒ Removing misinformation will not cause prejudices to go.

⇒ Why 6 weeks ⇒ Insight development takes time
                    (6 weeks were used for it)

⇒ Insight development helps in removal of prejudices.

⇒ When it came to ethnic prejudices → it worked
                                      very well
           "   " "   " family   "   → it did not
                                         work
                                   [No answer till now
                                    for this]

Also, there was an appeal to have consistency bet. attitude & beh.

↳ This appeal can be the reason for change and not insight dev.
     ^

Q) Do you think ~~catharsis~~ cathexis will lead to prejudice reduction
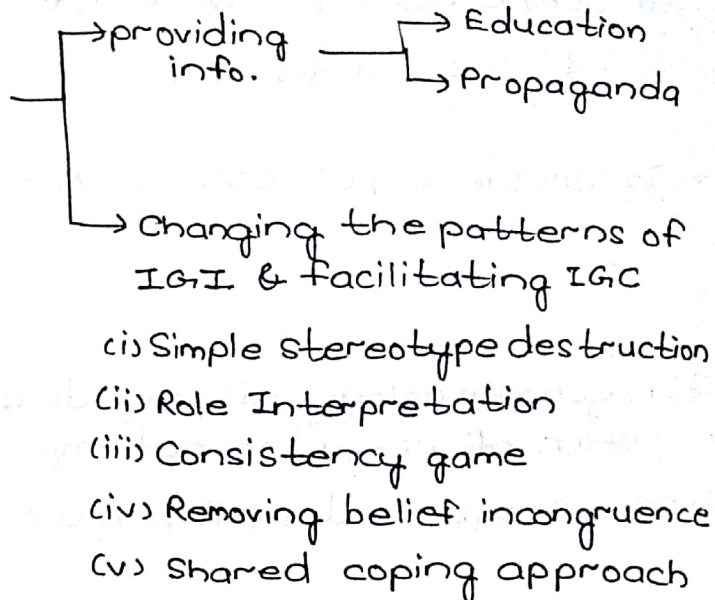

Ans= No

 ↳ Bandura, ~~Allport~~ Skinner

 ↳ eg: If energy (pent up feelings) is released by beating blacks, this beh. will be reinforced.

 (when people ~~who~~ see violent things, they become violent)

29-March-2019

* **Amelioration of Prejudice**

Direct Approach (Sociocultural approach) → providing info. → Education → Propaganda

→ Changing the patterns of IGI & facilitating IGC

(i) Simple stereotype destruction
(ii) Role Interpretation
(iii) Consistency game
(iv) Removing belief incongruence
(v) Shared coping approach

Removal of Prejudice
- → Symptomatic (Freudian) → Psychotherapy
  → Self Insight Therapy
  ↓
  Prejudices were due to
  [ego defensive mechanisms]
  ⇓
  Restructuring
  [Insight Development]
- → Direct (Socio-cultural Approach)

(All Humanistic & Freudian Approaches believe in development of insights)

Freud → Blocked out aspects of unconscious
  → Therapist is required

Humanist → Blocked out aspects of self
  → Patient himself

• In <u>socio-cultural Approach</u>, prejudice removal will involve:

a) Reattribution & Reappraisal

b) Dissonance production & reduction

c) Steps to reduce selective interpretation, perception, exposure & attention.

d) Reinforcement

700

(a), (b) & (c) ⟶ cognitivist

    (d) ⟶ behaviorist

* To enhance person's ZOA ⟶ so that counter-attitudinal
                               msg. is thought upon & not
                               rejected.

Q) Psychopathology of prejudice is small ~~kuk~~ story in expla-
nation of prejudice but imp. in development of prejudice.

Ans= Disease model of prejudice → Freud
* <u>Providing Info</u>

    (i) Education

    (ii) Propaganda

<u>Aim</u>
• Increase zone/Latitude of Acceptance of target group

⇒ We will consider knowledge function → as~~tes~~ less knowledge
                                          leads to prejudice.

* Changing the patterns of IGI & facilitating IGC
  (Allport)
→ Contact Hypothesis ⟶ when person comes in contact
                            with the oject of prejudice
                                ↓
                         he realises the baselessness
                         of the stereotypes & prejudices

                    contact

<u>Prejudice group</u>   ⎯⎯⎯prejudice⎯⎯→ Black
    white

• We have to ensure that selective I, P, R, A do not
come into play.

Conditions for the contact
___

→ Prolonged
→ Equal status
→ Pleasant setting
→ Voluntary

• As a result of contact:

(i) Prejudice removed (stereotype destruction)

(ii) Role interpretation
   (stereotype pertaining to a role)

(iii) Consistency game
___

    eg. Integrated Housing
      (whites & Blacks living as neighbours)
      (mere exposure effect)

(iv) Initially Dissonance is produced ⟶ This dissonance will be
      (as beh. of black was found to   removed by changing
      be different than what you   the prejudice towards
      expected)   blacks.

(v) Shared coping Approach
___
    ↳ Sherif etal
    ↳ Robber's cave experiment

⇒ & Categorisation ⟶ De categorisation → Re-categorisation

• Henry Tajfel → prejudice is inevitable
                 (it can be reduced but not removed)
          → Social Identity

⇒ Some evolutionary reason also → people who look like
                              you appear less

⇒ You will have some anxiety in dealing with people who do not look like you.

* Social identity → join a group of people who are like minded.

      → For survival the group needs:
        a) Cohesiveness
        b) Its size should expand
          (otherwise their is fear of losing to dominant group)

* In group → Ingroupism → attempt to dominate other outgroups
                              &
                 Ask people from other outgroups to join your group.

⇒ This is counter-productive for diverse society.

   (Attributional error)
→ In group heterogenity & out group homogenity
                      (to continue prejudice)

* People from collectivist culture → more prone to prejudice

* Common Ingroup Identity Model → convince people that
   [Re categorisation]   we all belong to the same group.
                      (This failed in India)

⇒ It is far easier to condition ‹a person to fear cockroach than a rabbit [we are biologically programmed for some responses]

* **Sherif Etal**
  Robber's cave experiment

22 boys ⟶ summer camp

⇒ same socio-economic status, educational level & locality

⇒ But they had never met each other

Stage I
* 2 groups ⟶ 11 each (Eagles & Rattlers)

  [These names will lead to self perception]

* They were given tasks that would require help from all 11 ⟶ eg. putting up a tent.

  ↳ Togetherness

⇒ The groups competed while putting up the tent.
⇒ Same activity led to competition

* Ingroup formation
  ↳ still not as much prejudice formation.

* football match ⟶ They were asked to win at all costs
  (competitive env.)

* Inter group competition ⟶ Inter group hostility

Now, To remove hostility ⟶ Inter group contact
* Both, the groups brought together for lunch and they were monitored (so that noone misbehaves)

⇒ They were told ⟶ huge reward awaits you, if you can win tug of war against a truck (loaded)

* First, only 11 of group tried
  ↳ They both tried & failed (only 11)

7·04

*They all came together & moved the truck.

- Shared coping
- Super ordinate goal
⇓
eg. people of different religions on a life boat & shark is ⚡ in the water.

⇒ They all want to achieve the goal but cannot achieve it individually → They have to co-operate.

⇒ This is a reason as why wars brings people ~~togeo~~ together.

* Shared coping ⇒ removal of prejudice.
(That cave was used by robbers to hide once and hence was called Robber's cave)

- Intensification → If I take you as a friend & we have to work for a common goal, hence the unlearning of stereotypes in intensified

- Friendship → Person with whom we work together for a common goal is a friend & hating a friend 70s

is difficult.

* Intergroup Conflict

It has been defined as perceived incompatibility of interests. Conflicts inevitably arise out of clashes of values, attitudes &/or beh. Conflicts may occur when persons or group hold competitive interests. Conflicts therefore are the result of disagreement over social issues, beliefs, ideologies or specific behaviors that occur when the parties have divergent interest concerning the same issue.

*Factors influencing conflict

(i) Power differential

(Haves vs Have Nots)

If Have Nots → get education → challenge → conflict
                                    Haves

(ii) Competition

- Non-zero sum game → one side winning does not mean other side losing.

- Zero sum game → one side winning means other side losing.
  eg. Football match in Robber's cave experiment

- Zero sum game → I gain at your expense → Conflict

⇒ Short term personal gain is chosen over long term collective gain & hence conflict.

⇒ Competition → major reason for com conflict

(iii) Relative deprivation

↳ Fraternal → group (You feel your group has been deprived)
↳ Egoistic → Individual (You feel you have been deprived) For

a) Wanting
b) Deserving
} They ~~make~~ lead relative deprivation to a conflict

⇒ Relative Dep. can work on +ve side ⇒ Work for the improvement of your group rather than harming other groups.

(iv) Conflicting Aspirations

eg. Kashmir conflict

↳ People are not able to appreciate the viewpoint of others → conflict becomes inevitable

(v) Ambiguity over Jurisdiction & responsibility

eg. Kashmir conflict

(vi) Misperception & faulty Attributions

↳ by White → factors

a) Virile self image (masculine)
(b) Diabolical enemy image
↳ consider other person as dubious

(c) Absence of empathy

(d) Moral self Image
↳ you think that your position is right (God is on our side)

(e) Delegitimisation

↳ Dehumanisation
↳ Trait characterisation

eg. Security forces (SF) ⟷ Terrorist Group (TG)

SF have to take action against TG, to stop their conscience → delegitimisation is done
→ They are told that TG is outside the norms
↓
Carry violent Action

(f) Military over confidence

(vii) Just World Hypothesis
   ↳ a typical attribution error

(viii) Presence of distrust bet. the groups

• Indian Context

Factors

(i) Presence of ideologies that condone rather than condemn violence.
(ii) Fear of limited resources.
(iii) Low legitimacy of state institutions.
(iv) Easy availability of firearms
(v) Presence of role models (aggressive)
(vi) Poor grievance redressal system
(vii) Factor that create perochial ~~outlook~~ mindset (narrow outlook)
   such as (a) widespread casteism
          (b) politicisation of caste, religion, etc

(viii) Educational & Economic backwardness

30-Mar-2019
* How to reduce intergroup conflict

(i) Power Restoration
   ↳ through affirmative action
   eg. Reservation
   ⇒ -ve :- a) People provided PR will have less motivation to work hard
          b) It ~~will~~ can increase prejudice
             (1) Tokenism
             (2) Reverse Discrimination
          c) In India, it leads to class formation within a caste.

708

* Tokenism → AFFixm Affirmative actions will give reasons to other
           groups to strengthen their pey prejudices towards
           the group for.

* Reverse Discrimination → eg. Teacher of high caste gives
                            more marks to students of
                            lower caste,as :

       (a) they will not trouble him
          rega saying that less
          marks have been given
          (contact with them is
          avoided)

       (b) In the actual exam, they
          will not do well
          (because of inflated
          scores given by the teacher,
          they had inflated sense of
          their ability)

⇒ These are coverty ways

(ii) Creation of super ordinate goals

   ↳ Recategorisation
   eg. Sherif's exp.

(iii) Opening up the channels of communication

- -

Recategorisation → Rehab. of Aids patients
             ↳ Juvenile Delinquency
             ↳ Alcohol Addicts

- -

→ Theory of planned beh. (for alcoholism)
→ Intra personal conflicts → interpersonal conflicts

(iv) understanding the aspirations of the other party

  ↳ openness   } ⇒ generation of integrative
  ↳ Agreeableness   }   solution (IS)   709

→ Blending the aspirations of both the parties

→ win-win game

→ In compromise → both the parties settle for something less than what they expected

→ participation of both parties will not be equal.

⇓

Difference from Integrative solution

⇒ Compromise is a type of Integrative solution finding.

* Integrative solution finding is the most desirable method of conflict resolution since the aspiration of both the parties are reconciled & blended to produce the result that integrate the needs of both the side & produced joint benefits. In some cases, it is possible to reach completely Integrated solutions wherein aspirations of both the sides are more or less completely met. But in most other cases, only partially integrated solutions can be reached which is similar to compromise.

Integrative solutions are the best because:

a) The benefit both the sides

b) Mutually agreed upon

c) strengthen feeling of co-operation as joint effort is needed to produce them

d) They tend to be more stable

(v) GRIT (Graduated & Reciprocal Initiatives in Tension Reduction.

↳ based on reciprocity
    eg. Nuclear disarmament by 2 countries

(vi) Negotiations

↳ if they involve use of dialogue & giving up their positions (check if Integrated solution is reached)   31

(vii) Third Party Intervention

→ It is not welcome → when no trust in third party
→ not always, people need a 3rd party, they want to solve the problem face to face.

Q) Is it correct to say that conflicts are always bad?
(Not always conflict is bad)

Ans= Freudian

Conflict can remove stagnation from life, it can force you to find new ways.

+ves
a) Conflict avoids stagnation & stimulates interest & curiosity.
b) It is a medium through which problems can be aired & solutions can be arrived.
c) External conflict to some extent fosters internal cohesiveness
d) Conflict is the part of testing & assessing oneself & therefore can be highly enjoyable exercise for those who want the full use of their capacity.

e) Conflict can help to demarcate the groups from one another & thus establish group & personal identities.

* 3 imp. terms

(i) Deindividuation

→ Any individual who is perpetrating violence has a feeling that he or she is somehow anonymous and therefore, no shame can be attached to them.

(ii) Dehumanisation

→ It refers to a belief that the human beings that are being killed or injured are not humans at all but infact are the units of enemy's fighting force that need to be eliminated.

eg.(Lynching → seeing a police personnel as something which is obstruction in reaching their goal.   7-11

(iii) Disinhibition
$\hookrightarrow$(Bandura)
$\hookrightarrow$Reduction in psychosocial forces within the individual that prevents him from acting in a controlled manner.

- Mob $\rightarrow$ active group of people having lot of energy
  $\rightarrow$ Diffusion & Displacement of responsibility

- Mob Control $\rightarrow$ a) Make rapport with some people & tell them that they can still be recognised in the crowd.

  b) Obstruct the movement $\rightarrow$ all the energy is employed in removing the barrier.

  $\rightarrow$ Place the barrier in such a way that it stops the flow

  $\rightarrow$ patience & tolerance (required)

* Why humanitarian classroom fails?
Ans= a) Moral Disengagement $\rightarrow$ selectively decide on the morals
                                (students)
                              $\rightarrow$ They can be moral when they want

  b) Students have poor self control

712

* Important Points

(can be used in all answers)

(i) Priming

(ii) Transfer of control

(iii) Desensitisation

(iv) Deindividualisation

(v) Dissonance Arousal

(vi) Narcissistic Rage

(vii) Disinhibition

(viii) Moral Disengagement

(ix) Displacement

(x) Faulty Appraisal

(xi) Misattribution

(xii) Trait Characterisation

(xiii) Illusion of Invulnerability

Social Integration

It refers to psychological & emotional integration of various groups in a society. SI is said to have been achieved when various social groups while retaining with their respective identities are able to also align with common identity that binds various groups together. To achieve SI, it is essential that the various social groups making up the society, are able to develop.

(a) Common attitude, aspirations & belief systems.

(b) common goals & mutually agreed upon manner of pursuing these goals.

SI can be viewed as social, psychological & educational process through which a feeling of unity, solidarity & cohesion develops among different social groups in a given society. It is the process of creating common bond & along with it feeling of brotherhood.

Many experts view SI as a 2-fold process of administrative & political integration one one hand & the psychological integration on the other hand. The latter is more imp. & difficult to achieve and it consists of 3 components.

(i) Cognitive component (similar belief systems)

(ii) Affective component (similar emotions generated)

(iii) Behavioral component (similar type of action is demonstrated when certain stimuli is presented.)
